############## GEANY ##############

MOVING AROUND IN THE DOCUMENT

Shortcut keys	Action	Description
Home	Go to Start of Line	Move the caret to the start of the line. Behaves differently if smart_home_key is set.
End	Go to End of Line	Move the caret to the end of the line.
Alt-Home	Go to Start of Display Line	Move the caret to the start of the display line. This is useful when you use line wrapping and want to jump to the start of the wrapped, virtual line, not the real start of the whole line. If the line is not wrapped, it behaves like Go to Start of Line.
Alt-End	Go to End of Display Line	Move the caret to the end of the display line. If the line is not wrapped, it behaves like Go to End of Line.
Alt-Up	Scroll up by one line	Scrolls the view.
Alt-Down	Scroll down by one line	Scrolls the view.
Ctrl-Shift-L	Scroll to current line	Scrolls the current line into the centre of the view. The cursor position and or an existing selection will not be changed.
Ctrl-L	Go to line	Focuses the Go to Line entry (if visible) or shows the Go to line dialog.
Ctrl-B	Goto matching brace	If the cursor is ahead or behind a brace, then it is moved to the brace which belongs to the current one. If this keyboard shortcut is pressed again, the cursor is moved back to the first brace.
Ctrl-M	Toggle marker	Set a marker on the current line, or clear the marker if there already is one.
Ctrl-,	Goto previous marker	Goto the previous marker in the current document.
Ctrl-.	Goto next marker	Goto the next marker in the current document.
Ctrl-/	Go to Previous Word Part	Goto the previous part of the current word.
Ctrl-\	Go to Next Word Part	Goto the next part of the current word.
Alt-Right (C)	Navigate forward a location	Switches to the next location in the navigation history. See the section called Code Navigation History.
Alt-Left (C)	Navigate back a location	Switches to the previous location in the navigation history. See the section called Code navigation history.
F1 (C)	Help ---> Opens the manual.	

MOVING THE DOCUMENT

Shortcut keys	Action	Description
Ctrl-Shift-PageDown	Move document right	Changes the current document with the right hand one.
Ctrl-Shift-PageUp	Move document left	Changes the current document with the left hand one.
Ctrl-PageDown (C)	Switch to right document	Switches to the next open document.
Ctrl-PageUp (C)	Switch to left document	Switches to the previous open document.
Ctrl-+ (C)	Zoom In	Zooms in the text.
Ctrl-- (C)	Zoom Out	Zooms out the text.
Ctrl-0	Zoom Reset	Reset any previous zoom on the text.
F11 (C)	Fullscreen	Switches to fullscreen mode.
F1 (C)	Help ---> Opens the manual.	

FINDING TEXT, SELECTING TEXT

Shortcut keys	Action	Description
Ctrl-F (C)	Find	Opens the Find dialog.
Ctrl-G	Find Next	Finds next result.
Ctrl-Shift-G	Find Previous	Finds previous result.
Ctrl-Shift-F	Find in files	Opens the Find in files dialog.
F7	Switch to Search Bar	Switches to the search bar in the toolbar (if visible).
Ctrl-Shift-E	Find Usage	Finds all occurrences of the current word (near the keyboard cursor) or selection in all open documents and displays them in the messages window.
Ctrl-Shift-D	Find Document	Usage Finds all occurrences of the current word (near the keyboard cursor) or selection in the current document and displays them in the messages window.
Alt-Shift-W	Select current word	Selects the current word under the cursor.
Alt-Shift-L	Select current line(s)	Selects the current line under the cursor (and any partially selected lines).
Alt-Shift-P	Select current paragraph	Selects the current paragraph under the cursor which is defined by two empty lines around it.
Ctrl-A (C)	Select all	Makes a selection of all text in the current document.
Control + Shift	Column mode editing (rectangular selections)	edits of the text within this selection will be done for every line in the selection.
Control + Alt	Column mode editing (rectangular selections)	edits of the text within this selection will be done for every line in the selection.
Ctrl-Shift-M	Mark All	Highlight all matches of the current word/selection in the current document with a colored box. If there's nothing to find, or the cursor is next to an existing match, the highlighted matches will be cleared.
Ctrl-M	Toggle marker	Set a marker on the current line, or clear the marker if there already is one.
Ctrl-,	Goto previous marker	Goto the previous marker in the current document.
Ctrl-.	Goto next marker	Goto the next marker in the current document.

```
F1 (C)                  Help ---> Opens the manual.

CUT & PASTE

Shortcut keys           Action                          Description

Ctrl-X (C)              Cut                             Cut the current selection to the clipboard.
Ctrl-Shift-X            Cut current line(s)             Cuts the current line (and any lines with a selection)
                                                        to the clipboard.
Ctrl-C (C)              Copy                            Copy the current selection to the clipboard.
Ctrl-Shift-C            Copy current line(s)            Copies the current line (and any lines with a selection)
                                                        to the clipboard.
Ctrl-V (C)              Paste                           Paste the clipboard text into the current document.
Ctrl-D                  Duplicate line or selection     Duplicates the current line or selection.
Ctrl-Shift-Delete       Delete to line end              Deletes from the current caret position to the end
                                                        of the current line.
Ctrl-K                  Delete current line(s)          Deletes the current line (and any lines with a selection).
F1 (C)                  Help ---> Opens the manual.

EDITING

Shortcut keys           Action                          Description

Shift-Alt-D             Insert date                     Inserts a customisable date.
Ctrl-E                  Toggle line commentation        Comments a line if it is not commented or removes a comment
                                                        if the line is commented.
Ctrl-Alt-U              Toggle case of selection        Changes the case of the selection. A lowercase selection
                                                        will be changed into uppercase and vice versa.
                                                        If the selection contains lower- and uppercase characters,
                                                        all will be converted to lowercase.
Tab                     Word part completion            When the autocompletion list is visible, complete the currently
                                                        selected item up to the next word part.
Tab                     Complete snippet                If you type a construct like if or for and press this key,
                                                        it will be completed with a matching template.
Ctrl-I                  Increase indent                 Indents the current line or selection by one tab or by spaces
                                                        in the amount of the tab width setting.
Ctrl-U                  Decrease indent                 Removes one tab or the amount of spaces of the tab width setting
                                                        from the indentation of the current
                                                        line or selection.
Alt-PageUp              Move line(s) up                 Move the current line or selected lines up by one line.
Alt-PageDown            Move line(s) down               Move the current line or selected lines down by one line.
Ctrl-Space              Complete word                   Shows the autocompletion list. If already showing tag completion,
                                                        it shows document word completion instead, even if it is not
                                                        enabled for automatic completion. Likewise if no tag suggestions
                                                        are available, it shows document word completion.
Ctrl-Shift-T            Go to tag declaration           Jump to the declaration of the current word or selection.
                                                        See Go to tag declaration.
Ctrl-T                  Go to tag definition            Jump to the definition of the current word or selection.
                                                        See Go to tag definition.
Ctrl-Z (C)              Undo                            Un-does the last action.
Ctrl-Y                  Redo                            Re-does the last action.
Ctrl-H (C)              Replace                         Opens the Replace dialog.
Ctrl-1 (2,3)            Send to Custom Command 1 (2,3)  Passes the current selection to a configured external command
                                                        (available for the first three configured commands, see Sending
                                                        text through custom commands for details).
Ctrl-Shift-Space        Show calltip                    Shows a calltip for the current function or method.
F1 (C)                  Help --> Opens the manual.

FILES

Shortcut keys           Action                          Description

Ctrl-N (C)              New                             Creates a new file.
Ctrl-O (C)              Open                            Opens a file.
